KVC-3/2-10

Operation

Directional valves type KVC-3/2-10 with direct solenoid operation are used to control the direction of hydraulic fluid flow.
 Type KVC-3/2-10 is a reduced version of type KV-6/2. It is used for alternate control of two one-pipe working units (e.g. Plunger) with common, main directional valve.

It is also very proper as bypass valve.

The change-over can also be done manually by pressing the emergency manual override.
